134	Executive Order - Waive Requirements of Davis Bacon Act The Davis-Bacon Act of 1931 is a United States federal law that establishes the requirement for paying the local prevailing wages on public works projects for laborers and mechanics. It applies to "contractors and subcontractors performing on federally funded or assisted contracts in excess of \$2,000 for the construction, alteration, or repair (including painting and decorating) of public buildings or public works". The act has been suspended five times by Presidents.				Significant changes in economic conditions, and the economic character of the construction industry since 1931, plus the passage of other wage laws, make the act unnecessary. After nearly 50 years, the Department of Labor has not developed an effective program to issue and maintain current and accurate wage determinations; it may be impractical to ever do so. The act results in unnecessary construction and administrative costs of several hundred million dollars annually (if the construction projects reviewed by GAO are representative) and has an inflationary effect on the areas covered by inaccurate wage rates and the economy as a whole. Artificially increasing the estimates boosts the projected benefits of climate-related regulations in agency cost-benefit analyses, such as energy efficiency regulations. The IRS is aware that many domestic corporations take advantage of the so-called “earnings stripping” rule to minimize U.S. taxes by paying deductible interest to a related foreign affiliate located in a low tax jurisdiction. This is a scheme commonly used to strip a U.S. entity of its taxable base and siphon off profit outside the country by way of interest deduction (rather than as a nondeductible dividend payment). The 385 Regulations intend to close this loophole. The 385 Regulations restrict the ability of a corporate entity to erode earnings by treating financial instruments which look to be debt at face-value as equity if certain conditions are not met. Specifically, the regulations now require that corporations claiming interest deductions on related-party loans provide documentation regarding the loan transaction similar to what is commonly required in an unrelated loan transaction.

One of the most controversial rules an agency has promulgated during the Obama administration arguably ran afoul of the APA’s notice-and-comment process: the Federal Communications Commission’s “network neutrality” regulation, which the FCC proposed in May 2014 and finalized in March 2015. When the agency proposed this rule, it indicated that it planned to rely on section 706 of the Telecommunications Act of 1996—in accordance with what FCC Chairman Tom Wheeler described as the “roadmap” offered by the D.C. Circuit’s 2014 opinion in Verizon v. FCC, which invalidated a 2010 rule issued by the agency in the name of net neutrality. At 400 pages and over 2,500 citations, the network neutrality regulations packs in a lot. The regulations reflect the lack of economic rigor, and will thus have an impact far greater than envisioned in the current plan.
