The Honorable Frank Pallone, Jr.

Chairman

House Committee on Energy and Commerce

United States House of Representatives

The Honorable Richard Neal

Chairman

House Ways and Means Committee

United States House of Representatives

The Honorable Cathy McMorris Rodgers

Ranking Member

House Committee on Energy and Commerce

United States House of Representatives

The Honorable Kevin Brady

Ranking Member

House Ways and Means Committee

United States House of Representatives

Dear Chairman Pallone, Ranking Member McMorris Rogers, Chairman Neal, and Ranking Member Brady:

Thank you for your leadership throughout the public health emergency. We write today to raise awareness and call for action to address an urgent health care epidemic: the growing number of Americans living with obesity who lack access to comprehensive care for this chronic disease.

Obesity is one of the **most significant health equity** issues facing the country with 49.6% of Black Americans and 44.8% Latino Americans living with obesity, and it's a top comorbidity for serious cases of COVID-19 or death. In fact, 78% of people who were hospitalized, placed on a ventilator or died from COVID-19 were affected by obesity or overweight. Obesity disproportionately impacts Black and Latino communities, who are nearly three times as likely to be hospitalized for severe cases of COVID-19 than whites.

Yet as the Delta variant spreads at an alarming rate, and health disparities grow more extreme, obesity care is out of reach for our nation's most vulnerable older adults because of outdated Medicare rules that perpetuate stigma and inequity.

In 2013, the American Medical Association formally recognized obesity as a disease requiring treatment and prevention efforts. Despite a growing number of treatment options and shifts in healthcare towards recognizing and treating obesity, Medicare, and many other payers, have not kept pace with the science, leaving millions of people vulnerable to costly chronic illnesses and premature death due to lack of treatment. Medicare falls particularly short on its lack of coverage of FDA-approved anti-obesity medications and overly narrow coverage for intensive behavioral therapy for obesity.

In Medicare today, anti-obesity medications are part of a short list of excluded drug categories, including hair loss drugs, erectile dysfunction medication, and cold and flu treatments. When Congress passed Part D in 2003, these categories were meant to exclude cosmetic or traditionally over-the-counter treatments. Yet obesity care has life or death implications, and is a disease with a disproportionate impact on minority communities.

Medicare also places undue restrictions on intensive behavioral therapy, only allowing primary care providers to deliver this service and not obesity medicine specialists, registered dietitians, psychologists, or evidence-based community-based programs, and severely restricting the physical locations this care can occur. These policies leave beneficiaries without access to core aspects of the continuum of care for obesity and prevents them from receiving adequate treatment.

As the Delta variant continues to drive a rise in cases, our most vulnerable communities are at an even greater risk of serious illness or death. **Congress must take action now to provide access to the full continuum of care for obesity,** including access to lifesaving FDA-approved anti-obesity medications and intensive behavioral therapy. The bipartisan *Treat and Reduce Obesity Act*, championed by Senators Carper and Cassidy and Representatives Kind, Ruiz, Wenstrup, and Reed, would make these changes and ensure Medicare coverage policies reflect current guidelines and standards of care.

As Congress debates whether to include dental, vision, and hearing coverage in Medicare, we urge you to also consider the <u>more than 2 in 5 older Americans</u> living with obesity and make lifesaving obesity treatments affordable and accessible. Obesity is associated with <u>nearly \$1,900</u> in excess annual medical costs per person (amounting to over \$170 billion in excess medical costs per year), with the highest costs occurring for adults 60-70. Better access to a range of effective treatment not only could save money but also save lives. This overdue fix to antiquated Medicare policies would be a meaningful step in addressing health equity for communities of color who are the most impacted by both COVID-19 and obesity.

We recognize the extraordinary work that lies ahead and believe an important first step is to ensure that our laws and regulations are driven by science. To that end, we call on Congress to immediately pass the *Treat and Reduce Obesity Act (S. 596/H.R. 1577)*. Doing so would provide the full continuum of care and relief for the many seniors living with obesity, making their lives safer and healthier.
