

# **PRESIDENT BIDEN CAN SET STRONG CLEAN CAR STANDARDS THAT PROTECT THE CLIMATE ...OR HE CAN HIT REVERSE.**

President Biden is about to set crucial auto pollution standards that apply through the year 2026. Automakers are pushing him for loophole-riddled rules weaker than what they agreed to with President Obama in 2012.

Our country faces deadly heatwaves, devastating drought, extreme storms, massive wildfires and unprecedented flooding. The president must set ambitious new standards strong enough to protect our climate.

In the coming weeks, President Biden must require automakers to produce cars and trucks that, at the very least, meet the nearly decade-old Obama standards.

To drive real progress, he should then tell the EPA to write new rules that:

- Phase out sales of gas-powered cars and trucks in favor of electric vehicles by 2030
- Require automakers to reduce heat-trapping pollution by 7% each year until then
- Close loopholes that allow manufacturers to escape real improvements
- Promote justice and good electric-vehicle jobs

Automakers have the technology to improve emissions. And consumers will save more at the pump than these technologies cost.

Now is the time for strong rules – not half measures.

**We're at the climate cliff and the stakes are too high to aim low.**
